

RAMANA KODURI

Full-Stack Software Developer | AI-Enabled Engineering

Toronto, Canada • (514) 586-9903 • knvramana234@gmail.com • LinkedIn • Portfolio

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with nearly 5 years of industry experience (since 2020) building enterprise-grade web applications, REST/OSLC APIs, and distributed backend systems across Java, Python, JavaScript/TypeScript, React, Spring Boot, Django, and Node.js. Currently delivering production fixes and full-stack features for IBM Engineering Lifecycle Management (ELM), serving Fortune 500 customers, and building AI-powered prototypes that integrate Large Language Models (IBM watsonx Granite, Anthropic Claude) and Model Context Protocol (MCP) servers into enterprise product workflows. Combines strong product-engineering fundamentals with hands-on LLM integration — UI, backend orchestration, prompt design, and tool/MCP-server extension. Seeking Full-Stack and AI Application Engineer roles building LLM-powered features into real products.

CORE COMPETENCIES

Full-Stack Development • LLM Integration • Agentic AI Prototyping • MCP Servers • Prompt Engineering • REST / OSLC API Design • React & TypeScript • Java / Spring Boot • Python / Django • Microservices • Cloud (AWS, Azure, GCP) • System Design

PROFESSIONAL EXPERIENCE

IBM Canada — Software Developer

Jan 2025 – Present

Engineering Lifecycle Management (ELM)

- Built a full-stack agentic AI prototype integrating Large Language Models (IBM watsonx Granite, Anthropic Claude) into the RMM web UI to assist users with workflow creation — spanning React/Dojo frontend, backend LLM orchestration, prompt design, and end-to-end request/response handling; demoed to engineering leadership.
- Extended and modified Model Context Protocol (MCP) servers to expose RMM/ELM capabilities as agent-callable tools, enabling natural-language interaction with structured enterprise data, services, and workflows.
- Designed and iterated on prompts, tool schemas, and orchestration logic for AI-assisted workflow generation — evaluating model outputs, refining system prompts, sequencing tool calls, and validating responses against domain constraints.
- Engineered full-stack enterprise features across RMM and IBM ELM — REST/OSLC service layers, Dojo-based web UI workflows, persistent data models, and cross-application integration flows used by Fortune 500 engineering teams.
- Coordinated iFix release readiness for IBM ELM interim-fix deliveries, tracking 15+ candidate defects across validation, backport decisions, and release scope to ensure on-time delivery to enterprise customers.
- Resolved 9+ customer-reported production defects spanning indexing, linking, permissions, configuration contexts, and cross-application integration — improving platform reliability and reducing recurring validation issues.
- Increased regression coverage by 15–20% for impacted backend-service and integration components using JUnit and Mockito, strengthening defect validation before iFix and final-build gates.
- Accelerated root-cause analysis for complex enterprise issues by correlating server logs, REST/OSLC traces, database records, validation reports, and HAR files across frontend, backend, persistence, and integration layers.

CognitiveBotics — Software Developer

Mar 2022 – Aug 2022

Ed-Tech Platform for Special-Needs Education • Hyderabad, India

- Delivered end-to-end full-stack features for an ed-tech platform supporting special-needs education across React, Django REST APIs, and MongoDB — including a real-time dashboard giving educators live visibility into student learning activity via WebSocket-driven updates.
- Cut dashboard response time by ~35% through Redis caching, query optimization, lazy loading, code splitting, and API response compression, reducing repeated data-fetching overhead across data-heavy workflows.
- Built 10+ reusable React components with Zustand/Redux state management and shipped 5+ Django REST API endpoints with request validation, structured error handling, and consistent response formatting.
- Containerized application components with Docker and validated frontend/API behavior with Git, Postman, React DevTools, and browser debugging during Agile sprint delivery.

Wipro — Project Engineer

Mar 2021 – Jan 2022

Hyderabad, India

- Developed and maintained Java Spring Boot services and REST APIs integrating with OSI PI (PI System) real-time data feeds, supporting enterprise process-data workflows and system integrations across business operations.
- Improved OSI PI data integration stability by debugging data-sync issues and delivering targeted fixes, reducing recurring stability incidents by ~25%.
- Resolved 20+ production defects and release issues by analyzing logs and validating API behavior across environments, delivering hotfixes that cut turnaround time on customer-impacting tickets by ~30%.
- Partnered with business analysts and QA to translate requirements into scalable, maintainable backend solutions, following Git-based workflows, code reviews, and Agile delivery practices.

LVPEI — Centre for Innovation — Software Developer

Jan 2020 – Mar 2021

Hyderabad, India

- Built backend APIs and workflow automation for patient care management, EMR, and clinical data workflows at a leading eye-care institute, with strong attention to data privacy and reliability.
- Integrated a payment gateway into patient billing workflows, processing ₹25L+ in secure patient payments during the initial rollout period.
- Developed a digital patient ID system that cut average check-in processing time by ~50%, reducing manual verification steps and improving front-desk throughput across clinics.
- Integrated backend services with EMR application databases and external systems for dependable data retrieval, processing, and reporting across clinical operations.
- Translated clinical workflow requirements into secure, user-focused application modules, improving data accessibility and efficiency across internal clinical workflows.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, SQL

Frontend: React.js, Next.js, Angular, Redux, Zustand, HTML5, CSS3, Tailwind, Dojo, Responsive & Component-Based UI

Backend: Node.js, Express.js, Django, Spring Boot, REST APIs, OSLC, Microservices, WebSockets, Celery, Redis

Databases & Data Systems: PostgreSQL, MySQL, Oracle, DB2, Derby, MongoDB, OSI PI (PI System)

Cloud & DevOps: AWS, Azure, GCP, Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD

AI / LLM Engineering: LLM Integration (IBM watsonx Granite, Anthropic Claude, OpenAI), Model Context Protocol (MCP) Servers, Agentic Workflows, Prompt Engineering, LLM Orchestration, Tool/Function Calling, GitHub Copilot, IBM Bob

Data & ML: Pandas, NumPy, Scikit-learn, Data Analysis

Testing & Tools: JUnit, Mockito, Jest, Postman, Git/GitHub, Agile/Scrum, Code Reviews

Architecture: System Design, Distributed Systems, Microservices, Caching Strategies, Performance Optimization, Scalable Web Applications

EDUCATION & CERTIFICATIONS

Master of Applied Computer Science — Concordia University, Montreal, Canada

2022 – 2024

Microsoft Certified: Azure Data Engineer Associate (DP-203)
