

Koduri Ramana

Software Developer

Canada • knvramana234@gmail.com • (514) 586-9903 • [Portfolio](#) • [LinkedIn](#)

SUMMARY

Software Developer with 4+ years of experience building full-stack applications, REST APIs, backend services, and cloud-ready enterprise systems across Java, Python, React, Django, Spring Boot, Node.js, and relational/NoSQL databases. Experienced in debugging distributed enterprise systems, integrating application layers, improving reliability, and using AI-assisted development tools for debugging, test creation, documentation, and code-quality improvements.

PROFESSIONAL EXPERIENCE

IBM Canada – Software Developer

Engineering Lifecycle Management (ELM) | 01/2025- Present

- Lead ongoing RMM iFix release coordination for recurring IBM ELM interim-fix deliveries, tracking 15+ candidate defects and known issues across fix readiness, validation status, backport decisions, release scope, and planned delivery alignment.
- Delivered blocker and critical fixes across 5+ enterprise application areas - REST services, UI workflows, model/persistence changes, indexing flows, TRS feeds, and OSLC integrations - strengthening release readiness for customer-facing IBM ELM builds.
- Developed and enhanced REST APIs, service-layer components, web application workflows, and UI-facing integrations across RMM/ELM components, improving consistency between frontend behavior, backend services, and lifecycle data flows.
- Resolved 9+ customer-reported production defects across indexing, linking, permissions, configuration contexts, and cross-application integration behavior, improving release stability and reducing recurring validation issues.
- Accelerated root-cause analysis for complex defects by correlating server logs, REST/OSLC responses, database records, validation reports, HAR files, and reproducible scenarios across frontend, backend, persistence, and integration layers.
- Increased regression coverage by 15–20% for impacted backend service and integration components using JUnit/Mockito, improving defect validation quality and reducing release risk before iFix and final-build gates.
- Partnered with senior developers, QA, L2 support, release managers, and Agile stakeholders to review code, validate builds, discuss scalable fix approaches, communicate release status, and deliver maintainable fixes under sprint timelines.
- Used AI-assisted tools to support code analysis, debugging, test-case ideation, documentation cleanup, and refactoring planning, with outputs validated through manual review, automated tests, and peer code review.

COGNITIVEBOTICS - Software Developer

Hyderabad, India | 03/2022 - 08/2022

- Developed end-to-end full-stack features for an ed-tech platform supporting special children education, building user-facing workflows across React, Django REST APIs, and MongoDB from reusable UI components to backend API integration and data persistence.
- Designed and implemented a real-time dashboard for enabling responsive data updates and improved visibility into student learning activities, application workflows, and operational data.
- Optimized full-stack performance through Redis caching, query optimization, lazy loading, code splitting, and API response compression, improving dashboard responsiveness and reducing repeated data-fetching overhead across data-heavy workflows.
- Built 10+ reusable React components and state-management patterns using Zustand/Redux for forms, lists, navigation flows, data-driven screens, dashboard state, asynchronous updates, and cross-component interactions.
- Designed and integrated 5+ Django REST API endpoints for CRUD operations, data retrieval, form submissions, dashboard updates, and frontend-backend communication across core ed-tech application workflows.
- Improved API reliability and data integrity by adding request validation, structured error handling, consistent response formatting, and database interaction checks across user-facing and admin-facing workflows.

- Containerized application components with Docker and validated frontend/API behavior using Git, Postman, React Developer Tools, and browser debugging tools during Agile sprint delivery and production-support work.

WIPRO - Project Engineer

Hyderabad, India | 03/2021 - 01/2022

- Developed and maintained Java Spring Boot services and REST APIs supporting enterprise workflows, system integrations, and business process automation across backend applications.
- Contributed across the full SDLC, including requirements analysis, application design, development, unit testing, deployment support, and production issue resolution to ensure stable software delivery.
- Improved application reliability by debugging defects, analyzing logs, validating API behavior, and delivering release fixes across development and test environments.
- Supported cloud-based deployments and environment troubleshooting, helping maintain operational stability and enabling smoother application delivery.
- Collaborated with business analysts, QA teams, and technical stakeholders to translate functional requirements into scalable and maintainable backend solutions.
- Followed Git-based workflows, code reviews, and Agile delivery practices to support high-quality, production ready software releases.

LVPEI-CENTRE FOR INNOVATION - Software Developer

Hyderabad, India | 01/2020 - 03/2021

- Developed backend APIs, workflow automation features, and system integrations supporting healthcare, EMR, and clinical data workflows.
- Built and maintained application modules for managing healthcare operational data, improving accessibility and enabling more efficient internal workflows.
- Integrated backend services with relational databases and external systems to support reliable data retrieval, processing, and reporting capabilities.
- Improved application reliability by resolving defects, optimizing backend logic, and supporting deployment and maintenance activities for healthcare applications.
- Collaborated with healthcare stakeholders and technical teams to translate clinical workflow requirements into secure, maintainable, and user-focused software solutions.
- Contributed to healthcare software development with emphasis on workflow accuracy, data privacy awareness, and dependable application behavior for clinical environments.

TECHNICAL SKILLS

- Languages: Python, JavaScript, TypeScript, Java, SQL
- Frontend: React.js, Next.js, Angular, Redux, Zustand, HTML5, CSS3, Dojo, Responsive Design, Tailwind, Component-Based UI
- Backend: Node.js, Express.js, Django, Spring Boot, REST APIs, Microservices, WebSockets, API Integration, Celery, Redis
- Databases: PostgreSQL, MySQL, Oracle, DB2, Derby, MongoDB
- Cloud & DevOps: AWS, Azure, GCP, Docker, Kubernetes, Jenkins, CI/CD, GitHub Actions
- Testing & Development Tools: JUnit, Mockito, Postman, Git, GitHub, Agile/Scrum, Code Reviews, Debugging
- Architecture & Engineering: System Design, Distributed Systems, Microservices Architecture, Caching Strategies, Performance Optimization, Scalable Web Applications
- AI & Data: LLM APIs, Prompt Engineering, MCP Tools, Machine Learning, Pandas, NumPy, Scikit-learn, Data Analysis
- AI-Assisted Development: IBM Bob, GitHub Copilot, ChatGPT, Claude, Gemini, AI-Assisted Coding, Code Analysis, Test Generation, Documentation Automation, Refactoring Support

EDUCATION

- **Master of Applied Computer Science** - Concordia University, Montreal, Canada | 2022 – 2024
